

Quick Start Guide

This page is designed to help new players quickly get started with the game, gain a basic understanding of its mechanics, and reduce issues encountered during the initial gameplay experience.

Disclaimer

This page is designed to help new players quickly get started with the game. It was written by player 404 NOT FOUND and represents solely their personal opinions. How to play the game is entirely up to each individual player's preference—there is no right or wrong way to play. This guide simply offers one approach to experiencing the game.

This guide assumes you have downloaded and are playing the game through Steam.

Launching the Game

This step likely needs no instruction, but please note that the first time you launch the game, it will need to load animation resources. This process may take some time and consume a certain amount of memory.

If the game takes an unusually long time to load, it is recommended to force-close the application and restart it.

After Launching

Once the game is launched, its core and most significant gameplay elements will be presented to you.

Indeed, at its core, this is a desktop program for idle viewing and interacting with a VPet. Therefore, rather than focusing solely on what the game offers, I would like to first introduce some settings that can enhance your experience.

Settings

To ensure a better idle experience, adjusting certain settings can be very useful. The following are some commonly used settings that can enhance your experience.

Right-click on your VPet, click "System" in the toolbar, then select "Settings Panel" from the pop-up menu to open the settings.
